About Finish Line Mathematics **5**

UNIT 1: Big Ideas from Grade 6 **7**

LESSON 1 6.RP.1, 2 **Ratios and Rates** [connects to 7.RP.1] **8**

LESSON 2 6.NS.1 **Dividing Fractions** [connects to 7.RP.1] **15**

LESSON 3 6.EE.2.a, b, c **Algebraic Expressions** [connects to 7.EE.1] **22**

LESSON 4 6.EE.7 **Writing and Solving Equations** [connects to 7.EE.4.a] **29**

LESSON 5 6.SP.3, 4 **Data Distributions and Displays** [connects to 7.SP.3, 4] **36**

UNIT 1 REVIEW **44**

UNIT 2: Ratios and Proportional Relationships **49**

LESSON 6 7.RP.1 **Unit Rates and Complex Fractions** **50**

LESSON 7 7.RP.2.a, b **Recognizing and Finding Proportional Relationships** **57**

LESSON 8 7.RP.2.c **Representing Proportional Relationships** **64**

LESSON 9 7.RP.2.a, b, d **Graphing Proportional Relationships** **71**

LESSON 10 7.RP.3 **Solving Problems with Proportional Relationships** **78**

LESSON 11 7.RP.3 **Solving More Problems with Proportional Relationships** **85**

UNIT 2 REVIEW **92**

UNIT 3: The Number System **97**

LESSON 12 7.NS.1.a, b, d **Adding Rational Numbers** **98**

LESSON 13 7.NS.1.c, d **Subtracting Rational Numbers** **105**

LESSON 14 7.NS.2.a, c **Multiplying Rational Numbers** **112**

LESSON 15 7.NS.2.b, c **Dividing Rational Numbers** **119**

LESSON 16 7.NS.2.d **Terminating and Repeating Decimals** **126**

LESSON 17 7.NS.3 **Solving Problems with Rational Numbers** **133**

UNIT 3 REVIEW **140**

UNIT 4: Expressions and Equations			145
LESSON 18	7.EE.2	Writing Expressions	146
LESSON 19	7.EE.1	Simplifying Expressions	152
LESSON 20	7.EE.1	Adding and Subtracting Expressions	159
LESSON 21	7.EE.1	Factoring Expressions	166
LESSON 22	7.EE.3, 4.a	Solving Problems with Equations	173
LESSON 23	7.EE.3, 4.b	Solving Problems with Inequalities	180
UNIT 4 REVIEW			187
UNIT 5: Geometry			192
LESSON 24	7.G.1	Scale Drawings	193
LESSON 25	7.G.2	Constructing Geometric Figures	200
LESSON 26	7.G.3	Cross Sections	207
LESSON 27	7.G.4	Circumference and Area of a Circle	214
LESSON 28	7.G.5	Solving Problems with Angle Relationships	221
LESSON 29	7.G.6	Area of Composite Figures	228
LESSON 30	7.G.6	Volume	235
LESSON 31	7.G.6	Surface Area	241
UNIT 5 REVIEW			248
UNIT 6: Statistics and Probability			253
LESSON 32	7.SP.1	Understanding Sampling	254
LESSON 33	7.SP.2	Making Inferences Based on Samples	261
LESSON 34	7.SP.3	Comparing Data Using Mean and Mean Absolute Deviation	268
LESSON 35	7.SP.4	Comparing Data Using Measures of Center and Variability	276
LESSON 36	7.SP.5	Understanding Probability	283
LESSON 37	7.SP.6	Experimental Probability	289
LESSON 38	7.SP.7.a, b	Using Probability Models	296
LESSON 39	7.SP.8.a, b, c	Compound Probability	302

Solving Problems with Proportional Relationships

PART 1

Introduction

A proportion is an equation that shows that two ratios are equal. You can use proportions to solve problems involving proportional relationships. Some types of proportional relationships involve percents. A **percent** is a ratio that compares a number to 100.

A percent compares a number to 100. For example, 12% is 12 out of 100, or $\frac{12}{100}$; and 47% is 47 out of 100, or $\frac{47}{100}$.

Dina's grade on the last math test was 80%. There were 20 problems on the test. How many problems did she answer correctly?

The ratio that describes Dina's score is 80 out of 100, or $\frac{80}{100}$. The ratio of the number of correct problems to total problems is $\frac{n}{20}$. These ratios must be equal to each other.

$$\frac{80}{100} = \frac{n}{20}$$

Solve for n by cross multiplying. Multiply the numerator of each ratio by the denominator of the other. Then solve the resulting equation.

$$\frac{80}{100} = \frac{n}{20}$$

$$100n = 80(20)$$

$$100n = 1,600$$

$$n = 16$$

Dina got 16 problems correct on the math test.

Suppose on her science test Dina got 22 out of 25 questions correct and she wants to know what percent this is. She can set up a similar proportion, and solve it in much the same way.

$$\frac{22}{25} = \frac{n}{100}$$

$$25n = 22(100)$$

$$25n = 2,200$$

$$n = 88$$

Dina scored 88% on the science test.

Both ratios in a proportion should be set up the same way.

$$\frac{22}{25} = \frac{n}{100} \quad \leftarrow \text{Part} \quad \leftarrow \text{Total}$$

Think About It

Explain how you would find the amount of discount on a cellphone if it is 40% off and the original cost is \$160.

Focused Instruction

You can use a proportion to find the whole when a percent is known.

- ▶ Pam pays 25% of her income as income tax. If she pays \$15,000 in income tax, what is her income?

What ratio represents her tax, in dollars, to what she earns?

What ratio represents her tax rate as a percent? _____

What proportion shows that these ratios are equal? _____

What procedure do you use to solve for the variable in the proportion?

What equation is the result of using this procedure on the proportion?

How do you solve this equation for the variable?

What is Pam's income? _____

Remember that a percent is a fraction with a denominator of 100.

You can use a proportion to find a discount when the percentage is known.

- ▶ Ahmet bought a car just before the new models came out. His car was originally priced at \$24,000, but the dealer offered an 8% discount. What is the amount of the discount?

What ratio represents the discount, in dollars, to the price of the car? _____

What ratio represents the discount rate as a percent? _____

What proportion shows that these ratios are equal?

What is the result of using cross multiplication on the proportion?

How do you solve this equation for the variable?

What is the amount of the discount? _____

Use inverse operations to isolate the variable.

Use what you know about proportions and percents to answer these questions.

- 1 Ulrich works in an appliance store. He makes a commission of 12% on all his sales. If his commission today is \$240, what is the total amount of his appliance sales for the day?

- 2 Sandra makes baskets to sell. Each basket costs her \$13 in materials. She increases that price by \$6.50 to get her selling price. What percent markup does she use?

Solve the following problems.

- 1 Eight new teachers were hired at Plainville Middle School. This represents 16% of the total number of teachers at the school. How many teachers work at Plainville Middle School? Show your work.

Remember that a percent is out of 100.

Answer _____ teachers

- 2 Caitlyn made \$300 last week and donated 20% of it to a charity. How much money did she donate? Show your work.

Set up a proportion using the percent.

Answer \$ _____

- 3 Brock bought a baseball bat that originally cost \$28. It was on sale for 40% off. What was the amount of the discount? Show your work.

A percent can be written as a ratio to 100.

Answer \$ _____

Solve the following problems.

- 1 This table shows the original price and discount amount for items at a gift store.

Original Price (\$)	5	15	25
Discount Amount (\$)	1.25	3.75	6.25

Each price in the table is discounted the same percent. What percent is the discount?

- A 12.5%
- B 25%
- C 50%
- D 62.5%
- 2 During a concert, 150 seats in a theater were filled. This represents 75% of the total seats in the theater.
- Part A** Write a proportion you could use to find the total number of seats.

Answer _____

- Part B** How many total seats are there? Show your work.

Answer _____ seats

- 3 A realtor gets a 4% commission on the sale of a house. How much commission does the realtor get on the sale of a \$180,000 house?
- A \$4,500
B \$7,200
C \$45,000
D \$72,000
- 4 Christian made a model of his favorite type of car. The length of the model was 6 inches long, which is 5% of the length of the actual car. How long is the actual car, in feet?

Answer _____ feet

- 5 Edwin paid \$16.25 tax on a new television that cost \$250.

Part A What percent tax did Edwin pay?

Answer _____ %

Part B Explain the steps you took to solve this problem.

- 6 Harrison takes out a loan for \$18,000. He will pay 6.25% simple interest annually on it.

Part A Write a proportion you could use to find the amount of interest per year.

Answer _____

Part B Find the amount of simple interest Harrison will pay annually. Show your work.

Answer \$ _____
