## Problems Based on Hidden Information

For some problems, the information you need is not spelled out. But it is information you already know, such as a measurement or a unit of time. You need to translate hidden information in the problem into a number you can use. Think carefully about numbers and units and how they are used in a problem.

**Try this problem. Think about words you need to change into numbers.**

- 7** The hay comes in small rectangular bales that weigh about 80 pounds each. How many bales equal a ton?

**A** What do you want to find out?

---

**B** What information do you know?

---

**C** What operation do you need?

---

**D** What information do you need to find the answer?

---

**E** Change the hidden information into a number you can use. Then write an equation to solve the problem.

**SAMPLE**

Here's another problem to try on your own.

- 8 About how many pounds of hay does Asia eat a day?

SAMPLE

# Volunteer Day

The Community Center sponsored a "Day of Caring." Volunteers signed up to rake leaves and do yard work for those who needed assistance. Volunteers could begin work as early as 8 A.M. and work until 4 P.M. Some of the volunteers are listed on this record sheet.

The volunteers put the leaves and trash into trash bags. The filled bags weighed a total of 400 pounds.

Community Center Third Annual DAY OF CARING	
Volunteer	Hours Worked
Lale	$5\frac{7}{12}$
Chanda	$5\frac{7}{12}$
Halit	$4\frac{5}{6}$
Rodrigo	$6\frac{3}{4}$

**Solve each problem. If there is not enough information to solve it, tell what is needed.**

- How many hours did Lale and Chanda work altogether? Write your answer in simplest form.
- A total of 9 adults and young people volunteered. They worked an average of  $5\frac{3}{4}$  hours per person. How many hours did the volunteers work in all?
- How many more hours did the young people work than the adults?

**A mixed number is a sum. You can break it apart and work with the whole numbers and fractions separately.**

- 4 Allowing 45 minutes for lunch, how many hours was it possible for a volunteer to work in a day? Show your answer as a mixed number

- 5 How many more hours and minutes did Rodrigo work than Halit?

**When you add or subtract fractions, the denominators must be the same.**

- 6 What was the average amount of time worked by the volunteers named in the chart?

- 7 Of the garbage collected by the volunteers,  $\frac{3}{5}$  was leaves. How many pounds of leaves did the volunteers collect?

8

Lale, Chanda, Halit, and Rodrigo together raked about  $\frac{3}{10}$  of the garbage collected. Lale and Chanda both raked  $\frac{2}{15}$  each, and Rodrigo raked 12 pounds more than Halit. How many pounds did each person rake? Explain how you found the answer.

**What total amount was collected by the four volunteers?**
