Multiplication and Division Number Sentences

3.OA.4, 3.OA.6

A fact family is always made up of the same three numbers.

Multiplication and division are **inverse operations**. This means the two operations do the opposite of each other. Multiplication puts groups together. Division separates things into groups. A **fact family** shows the multiplication and division number sentences for three numbers.

This is the fact family for 3, 5, and 15.

$$\begin{array}{l} 3 \times 5 = 15 \\ 5 \times 3 = 15 \end{array} \qquad \begin{array}{l} 15 \div 3 = 5 \\ 15 \div 5 = 3 \end{array}$$

Use your knowledge of fact families to find a missing number in a multiplication or division number sentence.

What number is missing in this number sentence?

$$4 \times \square = 24$$

Write a division fact that is in the same fact family: $24 \div 4 = \square$

Find the quotient of the division fact: $24 \div 4 = 6$

So, $4 \times 6 = 24$. The missing number is 6.

What number is missing in this number sentence?

$$49 \div 7 = \square$$

Write a multiplication fact in the same fact family: $7 \times \square = 49$

Ask yourself, "What number times 7 equals 49?"

Since $7 \times 7 = 49$, $49 \div 7 = 7$.

The missing number is 7.

Think of division as a multiplication sentence with a missing factor. Use your knowledge of multiplication facts to find the missing factor. Then you have the answer to the division problem.

$$35 \div 5 = \square$$

Think: What number times 5 equals 35?

$$5 \times 7 = 35$$

So, $35 \div 5 = 7$.

Read each problem. Circle the letter of the best answer.

SAMPLE What number goes in the box to make this number sentence true?

$$27 \div \square = 9$$

A 3

C 9

B 6

D 18

The correct answer is A. Think of the number sentence as $9 \times \square = 27$. Use your knowledge of multiplication facts to find the missing factor: $9 \times 3 = 27$. So, $27 \div 3 = 9$.

1 What is the missing number?

$$4 \times \square = 0$$

A 4

C 1

B 2

D 0

2 Which multiplication sentence can help you find $12 \div 3$?

A $6 \times \square = 12$

C $3 \times \square = 15$

B $3 \times \square = 12$

D $2 \times \square = 12$

3 Find the missing number.

$$80 \div \square = 8$$

A 2

C 8

B 4

D 10

4 Which fact is in the fact family for 2, 5, and 10?

A $50 \div 5 = 10$

C $5 \times 2 = 10$

B $10 \times 5 = 50$

D $10 \times 2 = 20$

5 What number is missing in this number sentence?

$$2 \times \square = 14$$

A 4

C 10

B 7

D 12

6 Which number makes both number sentences true?

$$5 \times \square = 30$$

$$30 \div 5 = \square$$

A 2

C 7

B 6

D 10

7 What number sentence is missing from this fact family?

$$4 \times 8 = 32$$

$$8 \times 4 = 32$$

$$32 \div 4 = 8$$

$$\square = ?$$

A $32 - 8 = 24$

C $32 \div 8 = 4$

B $4 + 8 = 12$

D $32 \div 2 = 16$

Read each problem. Write your answer.

SAMPLE Find the missing number.

$$16 \div \square = 8$$

Answer _____

The multiplication fact $2 \times 8 = 16$ tells you that $16 \div 2 = 8$. The missing number is 2.

8 What number is missing in this number sentence?

$$5 \times \square = 25$$

Answer _____

9 Write the fact family for 7, 9, and 63.

Answer _____

10 Find the missing number.

$$42 \div \square = 6$$

Answer _____

11 Is $3 \times 6 = 18$ part of the fact family for 3, 4, and 12? Explain.

12 Explain how you can use $6 \times 9 = 54$ to find $54 \div 9$.

Read the problem. Write your answer to each part.

13 An array can model a multiplication sentence as well as a division sentence.

Part A Draw an array for $5 \times 9 = 45$. Write the rest of the fact family with one multiplication sentence and two division sentences.

Answer _____

Part B In a fact family, what happens to the quotient in a division fact when it is written as a multiplication fact?

Look at the facts you wrote for part A. How are the numbers rearranged?
