Dividing Fractions

6.NS.1

The product of a number and its reciprocal is always 1.

To multiply fractions, multiply the numerators. Then multiply the denominators.

$$\frac{2}{3} \times \frac{4}{5} = \frac{2 \times 4}{3 \times 5} = \frac{8}{15}$$

To change a **mixed number** to a fraction greater than 1, multiply the whole number part by the denominator. Then add the numerator. This becomes the new numerator of the fraction. The denominator stays the same.

To change a fraction greater than 1 to a mixed number, divide the numerator by the denominator. Write the remainder as a fraction.

To divide fractions, multiply by the **reciprocal** of the second fraction. The numerator and denominator of a reciprocal switch places.

What is the reciprocal of each number?

$$\frac{5}{6} \quad \frac{1}{8} \quad 2$$

Switch the numerator and the denominator.

The reciprocal of $\frac{5}{6}$ is $\frac{6}{5}$.

The reciprocal of $\frac{1}{8}$ is $\frac{8}{1} = 8$.

As a fraction, $2 = \frac{2}{1}$. The reciprocal of $\frac{2}{1}$ is $\frac{1}{2}$.

What is the quotient of $\frac{3}{4} \div \frac{3}{8}$?

First rewrite as multiplication using the reciprocal of $\frac{3}{8}$.

The reciprocal of $\frac{3}{8}$ is $\frac{8}{3}$, so the equivalent multiplication expression is $\frac{3}{4} \times \frac{8}{3}$.

Multiply and reduce to lowest terms if necessary.

$$\frac{3}{4} \times \frac{8}{3} = \frac{24}{12} = 2$$

The quotient of $\frac{3}{4} \div \frac{3}{8} = 2$.

Read each problem. Circle the letter of the best answer.

SAMPLE Travis has a 6-foot long rope. He ties a knot in the rope every $\frac{2}{3}$ foot. How many knots are tied in the rope?

A 4

B 8

C 9

D 12

The correct answer is C. To find the number of knots, divide 6 by $\frac{2}{3}$. First write 6 as the fraction $\frac{6}{1}$. Use it to write the division problem: $\frac{6}{1} \div \frac{2}{3}$. Multiply by the reciprocal of $\frac{2}{3}$ and reduce: $\frac{6}{1} \times \frac{3}{2} = \frac{18}{2} = 9$ knots. Choice A is not correct because the numbers are multiplied, not divided. Choices B and D are not correct because a mathematical error was made.

1 What is the reciprocal of $\frac{5}{4}$?

A $\frac{1}{4}$

C $\frac{4}{5}$

B $\frac{4}{4}$

D $\frac{5}{5}$

2 Which number sentence shows the product of a number and its reciprocal?

A $\frac{2}{7} \times 0 = 0$

C $\frac{2}{7} \times 1 = \frac{2}{7}$

B $\frac{2}{7} \times \frac{7}{2} = 1$

D $\frac{2}{7} \times \frac{2}{7} = \frac{4}{49}$

3 A hiking trail is $\frac{4}{5}$ mile long. A total of 8 markers are placed equal distances apart to help guide hikers. How far is one marker from the next?

A $\frac{1}{10}$ mi

C $\frac{5}{32}$ mi

B $\frac{2}{5}$ mi

D $\frac{32}{5}$ mi

4 What is the quotient of $\frac{3}{10} \div \frac{5}{12}$?

A $\frac{1}{8}$

C $\frac{5}{6}$

B $\frac{4}{11}$

D $\frac{18}{25}$

5 A piece of land is $\frac{2}{3}$ acre. It is divided evenly into 3 pieces. What is the size of each piece of land?

A $\frac{1}{3}$ acre

C 2 acres

B $\frac{2}{9}$ acre

D $2\frac{1}{3}$ acres

6 A bottle contains 8 cups of juice. The juice is poured into glasses that hold $\frac{3}{4}$ cup each. How many glasses can be filled with the juice?

A 6

C $10\frac{2}{3}$

B $8\frac{3}{4}$

D 12

Read each problem. Write your answer.

SAMPLE Carmen walked $2\frac{1}{2}$ miles in $\frac{3}{4}$ hour. What was her average walking speed, in miles per hour?

Answer _____

To find the average walking speed, divide $2\frac{1}{2}$ by $\frac{3}{4}$. Change the mixed number to a fraction: $2\frac{1}{2} = \frac{2 \times 2 + 1}{2} = \frac{5}{2}$. Now divide: $\frac{5}{2} \div \frac{3}{4} = \frac{5}{2} \times \frac{4}{3} = \frac{20}{6} = \frac{10}{3}$. The fraction $\frac{10}{3} = 10 \div 3 = 3\frac{1}{3}$. The average walking speed was $3\frac{1}{3}$ miles per hour.

7 It rained a total of $\frac{2}{3}$ inch in 4 hours. What was the average amount of rainfall each hour? Show your work.

Answer _____

8 A recipe makes a total of 5 cups of pudding. A serving of pudding is $\frac{3}{4}$ cup. How many servings of pudding does the recipe make? Show your work.

Answer _____

9 Horses are measured in units called hands. One hand equals $\frac{1}{3}$ foot. A horse is $5\frac{1}{3}$ feet tall. How tall is this horse in hands? Show your work.

Answer _____

Read the problem. Write your answer to each part.

- 10 Jada surveyed some students to see which tool they most favored for communicating with friends. The results of her survey are shown in this circle graph.

Part A What is the reciprocal of each fraction in the circle graph?

Answer _____

Part B A total of 50 students said they favored text messages to communicate with friends. How many total students did Jada survey? Show your work or explain how you know.

What division expression can be used to answer this question?
