Lesson 21	Functions	44
Lesson 22	Domain and Range	46
	How to Answer Constructed Response Questions	48

LESSON 18 Representing Data

Numerical relationships can be represented with words, equations, tables, and graphs.

Salmon is on sale for \$8.00 per pound. The cost for x pounds is y dollars, where $y = 8x$.

x	y
1	8
2	16
3	24
4	32

A straight line on a graph represents a steady rate of increase or decrease.

Read each problem. Circle the letter of the best answer.

1 Ron earns w dollars per hour working at a restaurant. Which amount in dollars can be described by the expression $8(w + 3)$?

- A** the amount Ron earns working 8 hours
- B** the amount Ron earns working 8 hours if he gets a \$3 tip
- C** the amount Ron earns working 8 hours per day for 3 days
- D** the amount Ron earns working 8 hours if he gets a \$3 per hour raise

If Ron's hourly wage is increased from w to $w + 3$ and he works 8 hours, the amount in dollars he will earn is $8(w + 3)$. The correct answer is D.

2 Which graph could represent a balloon that rises quickly at first, then slows?

Use this graph to answer questions 3 and 4.

3 Which equation describes the line?

- A** $y = x - 1$
- B** $y = x + 4$
- C** $y = \frac{1}{2}x + 2$
- D** $y = \frac{1}{2}x + 4$

4 If x = time and y = speed, which situation could be described by the graph?

- A** Kira was walking at a certain speed, then began to slow down.
- B** Kira was walking at a certain speed, then began to speed up.
- C** Kira was standing still, then began to walk at a steady pace.
- D** Kira was standing still, then began to walk, gradually speeding up.

Read each problem. Write your answers.

5 Look at this graph.

A Describe a situation that could be represented by this graph.

B Could the graph represent a situation where something's value is changing at a steady rate? Explain why or why not.

6 Tatiana earns \$10 per hour planting trees, plus a \$40 bonus each day.

A Write an equation to show the relationship between x , the number of hours she works on a certain day, and y , the amount in dollars she earns that day.

Answer: _____

B Use your equation to complete this table of values.

x	y
2	
4	
6	
8	
10	

C Graph your equation on the plane below.
