Introduction to *Get Set for Math* 4

How to Answer Test Questions 5

UNIT 1 Rates and Proportional Relationships 9

7.RP.1 **Lesson 1** Ratios and Rates 10

7.RP.2.a, b **Lesson 2** Proportions 14

7.RP.2.a–d **Lesson 3** Proportional Relationships 20

7.RP.3 **Lesson 4** Solving Percent Problems 26

UNIT 2 The Number System 31

7.NS.1.a–c **Lesson 5** Adding and Subtracting Rational Numbers 32

7.NS.2.a, b, d **Lesson 6** Multiplying and Dividing Rational Numbers 37

7.NS.1.d, 2.c **Lesson 7** Operation Properties 43

7.NS.3; 7.EE.3 **Lesson 8** Solving Problems with Rational Numbers 48

UNIT 3 Expressions and Equations 53

7.EE.2 **Lesson 9** Writing Expressions 54

7.EE.1, 2 **Lesson 10** Adding and Subtracting Expressions 59

7.EE.1, 2 **Lesson 11** Simplifying and Factoring Expressions 64

7.EE.4.a **Lesson 12** Equations 68

7.EE.4.b **Lesson 13** Inequalities 73

UNIT 4 Geometry 79

7.G.1 **Lesson 14** Scale Drawings 80

7.G.2 **Lesson 15** Constructing Geometric Figures 86

7.G.3 **Lesson 16** Cross Sections 92

7.G.4 **Lesson 17** Circles 98

7.G.5 **Lesson 18** Angle Relationships 103

7.G.6 **Lesson 19** Area 108

7.G.6 **Lesson 20** Volume 114

7.G.6 **Lesson 21** Surface Area 119

UNIT 5 Statistics and Probability 125

7.SP.1, 2 **Lesson 22** Sampling 126

7.SP.2, 3, 4 **Lesson 23** Comparing Data Distributions 131

7.SP.5, 7.a **Lesson 24** Probability 135

7.SP.6, 7.b **Lesson 25** Experimental Probability 140

7.SP.8.a–c **Lesson 26** Compound Probability 145

Flash Cards 153

Focus Lesson

An **expression** is a group of numbers, operations, and symbols that describes the value of something. An **algebraic expression** includes **variables**, symbols or letters that represent unknown values or values that can change. A **numeric expression** is an expression with numbers and operations but no variables.

Words can be translated into expressions, as shown in the examples below.

Words	Expression
Six more than a number	$x + 6$
Six less than a number	$x - 6$
A number less than six	$6 - x$
Six times a number	$6x$
The quotient of a number and 6	$\frac{x}{6}$

Expressions can sometimes be written in different ways to represent the same value. These expressions are called **equivalent expressions**.

The number of ticket sales reported by a theater this month was 12% fewer than the number of ticket sales reported by the theater last month. If the number of ticket sales reported by the theater last month was x , which of the following expressions could represent the number of ticket sales reported by the theater this month? Select all that apply.

- A $0.88x$
- B $1.12x$
- C $-0.12x$
- D $x - 0.12$
- E $x - 0.12x$
- F $x + 0.12x$

- 1 What operation is indicated by the words *12% fewer*? _____
- 2 Write an expression to represent 12% of the ticket sales last month. _____
- 3 How is this expression related to the ticket sales this month?

- 4 What is one expression that could represent the number of ticket sales this month? _____

From the given expressions, which could represent the number of ticket sales this month?

Guided Practice

This diagram shows the lengths, in units, of a triangle.

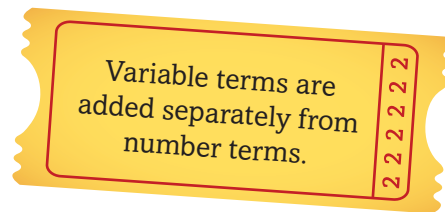

In each row of the table below, mark the appropriate box with an X to indicate whether or not the expression is equivalent to the perimeter, in units, of the triangle.

Expression	Equivalent to Perimeter	Not Equivalent to Perimeter
$4x - 9$		
$4(3x) - 9$		
$3(4x - 1 - 2)$		
$3(4x) + 3(-3 - 6)$		
$4x + 4x + 4x - 3 - 6$		

1 Describe in words how to find the perimeter of a triangle.

2 What is one expression that can be used to represent the perimeter of this triangle?

3 Describe in words at least one way the expression you wrote can be written another way.

Which expressions in the table are equivalent to the perimeter of the triangle?

Independent Practice

Solve the following problems.

- 1 The height of a tree increased by 10% during one year. The height of the tree at the beginning of the year was h feet. Which of the following expressions could represent the height of the tree now? Select all that apply.

- A $0.10h$
- B $1.10h$
- C $h + 10$
- D $h + 0.10$
- E $h(1 + 0.1)$
- F $h(1 + 10)$

- 2 The diagram below shows the dimensions of a rectangle.

The expression $2(x + 8 + x + 2)$ represents the perimeter, in inches, of the rectangle. Which of the following expressions is equivalent to this perimeter? Select all that apply.

- A $2x + 10$
- B $2x + 20$
- C $4x + 20$
- D $2x + 8 + x + 2$
- E $2(2x) + 2(8 + 2)$

Independent Practice

- 3 The length of a rectangle is 6 centimeters less than twice the width of the rectangle.
- The width of the rectangle is w centimeters.
 - The expression $2w + 6$ represents the length, in centimeters, of the rectangle.

Which of the following expressions can be used to represent the area, in square centimeters, of the rectangle? Select all that apply.

- A** $2w^2 - 6$
- B** $2w - 6w$
- C** $2w^2 - 6w$
- D** $w(2w) - 6$
- E** $w(2w - 6)$
- F** $w(2w) - w(6)$
- 4 Ronan bought a baseball glove on sale. The price of the baseball glove was discounted by $\frac{1}{3}$ off the regular price. Ronan paid 5% sales tax on the discounted price. The regular price of the baseball glove was b dollars. Which of the following expressions represents the total price Ronan paid for the baseball glove? Select all that apply.

- A** $\frac{1}{3}b + 0.05b$
- B** $\frac{2}{3}b + 0.05b$
- C** $\frac{2}{3}b + 0.05\left(\frac{2}{3}b\right)$
- D** $\frac{2}{3}b + 1.05\left(\frac{2}{3}b\right)$
- E** $\left(1 - \frac{1}{3}\right)b + (0.05)\left(\frac{2}{3}b\right)$
- F** $\left(1 - \frac{1}{3}\right)b + (1 + 0.05)\left(\frac{2}{3}b\right)$

Independent Practice

5 Figures 1, 2, and 3 shown below were created using square tiles.

Figure 1

Figure 2

Figure 3

The expression $4n - 3$ can be used to represent the number of square tiles in a figure, where n represents the figure number.

In each row of the table below, mark the appropriate box with an X to indicate whether or not the expression can be used to find the number of square tiles in Figure n .

Expression	Equivalent to Number of Square Tiles in Figure n	Not Equivalent to Number of Square Tiles in Figure n
$(4 - 1)n$		
$4(n + 1)$		
$1 + 4n - 4$		
$1 + 4(n - 1)$		
$1 + (4 - 1)n$
