| NUMBER AND OPERATIONS-FRACTIONS |  |  |
| :---: | :---: | :---: |
| Cluster | Common Core Learning Standard | Next Generation Learning Standard |
| Use equivalent fractions as a strategy to add and subtract fractions. | 5.NF. 1 Add and subtract fractions with unlike denominators (including mixed numbers) by replacing given fractions with equivalent fractions in such a way as to produce an equivalent sum or difference of fractions with like denominators. For example, $2 / 3+5 / 4=8 / 12+15 / 12=23 / 12$. (In general, $a / b+c / d=(a d$ $+b c) / b d$.). | NY-5.NF. 1 Add and subtract fractions with unlike denominators (including mixed numbers) by replacing given fractions with equivalent fractions in such a way as to produce an equivalent sum or difference of fractions with like denominators. <br> e.g., $\begin{aligned} & \text { - } \frac{1}{3}+\frac{2}{9}=\frac{3}{9}+\frac{2}{9}=\frac{5}{9} \\ & \text { - } \frac{2}{3}+\frac{5}{4}=\frac{8}{12}+\frac{15}{12}=\frac{23}{12} \end{aligned}$ |
|  | 5.NF. 2 Solve word problems involving addition and subtraction of fractions referring to the same whole, including cases of unlike denominators, e.g., by using visual fraction models or equations to represent the problem. Use benchmark fractions and number sense of fractions to estimate mentally and assess the reasonableness of answers. For example, recognize an incorrect result 2/5 +1/2 = $3 / 7$, by observing that $3 / 7<1 / 2$. | NY-5.NF. 2 Solve word problems involving addition and subtraction of fractions referring to the same whole, including cases of unlike denominators. <br> e.g., using visual fraction models or equations to represent the problem. <br> Use benchmark fractions and number sense of fractions to estimate mentally and assess the reasonableness of answers. <br> e.g., Recognize an incorrect result $\frac{2}{5}+\frac{1}{2}=\frac{3}{7}$ by observing that $\frac{3}{7}<\frac{1}{2}$. |
| Apply and extend previous understandings of multiplications and division to multiply and divide fractions. | 5.NF. 3 Interpret a fraction as division of the numerator by the denominator $(a / b=a \div b)$. Solve word problems involving division of whole numbers leading to answers in the form of fractions or mixed numbers, e.g., by using visual fraction models or equations to represent the problem. For example, interpret 3/4 as the result of dividing 3 by 4 , noting that $3 / 4$ multiplied by 4 equals 3 , and that when 3 wholes are shared equally among 4 people, each person has a share of size 3/4. If 9 people want to share a 50 -pound sack of rice equally by weight, how many pounds of rice should each person get? Between what two whole numbers does your answer lie? | NY-5.NF. 3 Interpret a fraction as division of the numerator by the denominator $(a / b=a \div b)$. <br> e.g., Interpret $\frac{3}{4}$ as the result of dividing 3 by 4 , noting that $\frac{3}{4}$ multiplied by 4 equals 3 , and that when 3 wholes are shared equally among 4 people each person has a share of size $\frac{3}{4}$. <br> Solve word problems involving division of whole numbers leading to answers in the form of fractions or mixed numbers. <br> e.g., using visual fraction models or equations to represent the problem. <br> e.g., If 9 people want to share a 50 -pound sack of rice equally by weight, how many pounds of rice should each person get? Between what two whole numbers does your answer lie? |

## NUMBER AND OPERATIONS—FRACTIONS

| Cluster |
| :--- |
| Apply and |
| extend previous |
| understandings |
| of multiplications |
| and division to |
| multiply and |
| divide fractions. |

Common Core Learning Standard
5.NF. 4 Apply and extend previous understandings of multiplication to multiply a fraction or whole number by a fraction.
a. Interpret the product $(a / b) \times q$ as a parts of a partition of $q$ into $b$ equal parts; equivalently, as the result of a sequence of operations $a \times q \div b$. For example, use a visual fraction model to show (2/3) $\times$ $4=8 / 3$, and create a story context for this equation. Do the same with $(2 / 3) \times(4 / 5)=8 / 15$. (In general, $(a / b) \times(c / d)=a c / b d$.)
b. Find the area of a rectangle with fractional side lengths by tiling it with unit squares of the appropriate unit fraction side lengths, and show that the area is the same as would be found by multiplying the side lengths. Multiply fractional side lengths to find areas of rectangles, and represent fraction products as rectangular areas.

## Next Generation Learning Standard

NY-5.NF. 4 Apply and extend previous understandings of multiplication to multiply a fraction or whole number by a fraction.

NY-5.NF.4.a Interpret the product $\frac{a}{b} \times q$ as a parts of a partition of $q$ into $b$ equal parts; equivalently, as the result of a sequence of operations a $\times q \div b$.
e.g., Use a visual fraction model to show $\frac{2}{3} \times 4=\frac{8}{3}$, and create a story context for this equation. Do the same with $\frac{2}{3} \times \frac{4}{5}=\frac{8}{15}$.
NY-5.NF.4.b Find the area of a rectangle with fractional side lengths by tiling it with rectangles of the appropriate unit fraction side lengths, and show that the area is the same as would be found by multiplying the side lengths. Multiply fractional side lengths to find areas of rectangles, and represent fraction products as rectangular areas.
e.g.,

The shaded portion shows the rectangle with the appropriate unit fraction side lengths.

The area of a $\frac{2}{3} \times \frac{3}{4}$ rectangle is $\frac{6}{12}$ because the whole is partitioned into 12 parts with 6 of them shaded.

## NUMBER AND OPERATIONS—FRACTIONS

## Cluster <br> Apply and extend previous understandings of multiplications and division to multiply and divide fractions.

Common Core Learning Standard
5.NF. 5 Interpret multiplication as scaling (resizing), by:
a. Comparing the size of a product to the size of one factor on the basis of the size of the other factor, without performing the indicated multiplication.
b. Explaining why multiplying the given number by a fraction greater than 1 results in a product greater than the given number (recognizing multiplication by whole numbers greater than 1 as a familiar case); explaining why multiplying a given number by a fraction less than 1 results in a product smaller than the given number; and relating the principle of fraction equivalence $a / b=$ $(n \times a) /(n \times b)$ to the effect of multiplying $a / b$ by 1 .

## Next Generation Learning Standard

## NY-5.NF. 5 Interpret multiplication as scaling (resizing).

NY-5.NF.5.a Compare the size of a product to the size of one factor on the basis of the size of the other factor, without performing the indicated multiplication.
e.g. In the case of $10 \times \frac{1}{2}=5,5$ is half of 10 and 5 is 10 times larger than $\frac{1}{2}$.

NY-5.NF.5.b Explain why multiplying the given number by a fraction greater than 1 results in a product greater than the given number (recognizing multiplication by whole numbers greater than 1 as a familiar case). Explain why multiplying a given number by a fraction less than 1 results in a product smaller than the given number. Relate the principle of fraction equivalence $\frac{a}{b}=\frac{a}{b} \times \frac{n}{n}$ to the effect of multiplying $\frac{a}{b}$ by 1 .
e.g.,

Explain why $4 \times \frac{3}{2}$ is greater than 4 .
Explain why $4 \times \frac{1}{2}$ is less than 4.
$\frac{1}{3}$ is equivalent to $\frac{2}{6}$ because $\frac{1}{3} \times \frac{2}{2}=\frac{2}{6}$.
NY-5.NF. 6 Solve real-world problems involving multiplication of fractions and mixed numbers.
e.g., using visual fraction models or equations to represent the problem.

## NUMBER AND OPERATIONS—FRACTIONS

## Cluster

Apply and extend previous understandings of multiplications and division to multiply and divide fractions.

Common Core Learning Standard
5.NF. 7 Apply and extend previous understandings of division to divide unit fractions by whole numbers and whole numbers by unit fractions.
a. Interpret division of a unit fraction by a non-zero whole number, and compute such quotients. For example, create a story context for $(1 / 3) \div 4$, and use a visual fraction model to show the quotient. Use the relationship between multiplication and division to explain that $(1 / 3) \div 4=1 / 12$ because $1 / 12 \times 4=1 / 3$.
b. Interpret division of a whole number by a unit fraction, and compute such quotients. For example, create a story context for $4 \div(1 / 5)$, and use a visual fraction model to show the quotient. Use the relationship between multiplication and division to explain that $4 \div(1 / 5)=20$ because $20 \times(1 / 5)=4$.
c. Solve real-world problems involving division of unit fractions by non-zero whole numbers and division of whole numbers by unit fractions, e.g., by using visual fraction models and equations to represent the problem. For example, how much chocolate will each person get if 3 people share $1 / 2 \mathrm{lb}$ of chocolate equally? How many 1/3-cup servings are in 2 cups of raisins?

Note: Students able to multiply fractions in general can develop strategies to divide fractions in general, by reasoning about the relationship between multiplication and division. But division of a fraction by a fraction is not a requirement at this grade.

## Next Generation Learning Standard

NY-5.NF. 7 Apply and extend previous understandings of division to divide unit fractions by whole numbers and whole numbers by unit fractions.

NY-5.NF.7.a Interpret division of a unit fraction by a non-zero whole number, and compute such quotients.
e.g., Create a story context for $\frac{1}{3} \div 4$ and use a visual fraction model to show the quotient. Use the relationship between multiplication and division to explain that $\frac{1}{3} \div 4=\frac{1}{12}$ because $\frac{1}{12} \times 4=\frac{1}{3}$.

NY-5.NF.7.b Interpret division of a whole number by a unit fraction, and compute such quotients.
e.g., Create a story context for $4 \div \frac{1}{5}$ and use a visual fraction model to show the quotient. Use the relationship between multiplication and division to explain that $4 \div \frac{1}{5}=20$ because $20 \times \frac{1}{5}=4$.

NY-5.NF.7.c Solve real-world problems involving division of unit fractions by non-zero whole numbers and division of whole numbers by unit fractions.
e.g., using visual fraction models and equations to represent the problem.
e.g., How much chocolate will each person get if 3 people share $\frac{1}{2}$ lb of chocolate equally? How many $\frac{1}{3}$-cup servings are in 2 cups of raisins?

Note: Students able to multiply fractions in general can develop strategies to divide fractions in general, by reasoning about the relationship between multiplication and division. But division of a fraction by a fraction is not a requirement until grade 6. (NY-6.NS.1).

## MEASUREMENT AND DATA

| Cluster | Common Core Learning Standard | Next Generation Learning Standard |
| :---: | :---: | :---: |
| Convert like measurement units within a given measurement system. | 5.MD. 1 Convert among different-sized standard measurement units within a given measurement system (e.g., convert 5 cm to 0.05 m ), and use these conversions in solving multistep, real-world problems. | NY-5.MD. 1 Convert among different-sized standard measurement units within a given measurement system when the conversion factor is given. Use these conversions in solving multistep, realworld problems. <br> Notes: <br> - All conversion factors will be given. <br> - Grade 5 expectations for decimal operations are limited to work with decimals to hundredths. |
| Represent and interpret data. | 5.MD. 2 Make a line plot to display a data set of measurements in fractions of a unit ( $1 / 2,1 / 4,1 / 8$ ). Use operations on fractions for this grade to solve problems involving information presented in line plots. For example, given different measurements of liquid in identical beakers, find the amount of liquid each beaker would equally. | NY-5.MD. 2 Make a line plot to display a data set of measurements in fractions of a unit $\left(\frac{1}{2}, \frac{1}{4}, \frac{1}{8}\right)$. Use operations on fractions for this grade to solve problems involving information presented in line plots. <br> e.g., Given different measurements of liquid in identical beakers, make a line plot to display the data and find the total amount of liquid in all of the beakers. |
| Geometric measurement: understand concepts of volume and relate volume to multiplication and addition. | 5.MD. 3 Recognize volume as an attribute of solid figures and understand concepts of volume measurement. <br> a. A cube with side length 1 unit, called a "unit cube," is said to have "one cubic unit" of volume, and can be used to measure volume. <br> b. A solid figure which can be packed without gaps or overlaps using $n$ unit cubes is said to have a volume of $n$ cubic units. | NY-5.MD. 3 Recognize volume as an attribute of solid figures and understand concepts of volume measurement. <br> NY-5.MD.3.a Recognize that a cube with side length 1 unit, called a "unit cube," is said to have "one cubic unit" of volume, and can be used to measure volume. <br> NY-5.MD.3.b Recognize that a solid figure which can be packed without gaps or overlaps using $n$ unit cubes is said to have a volume of $n$ cubic units. |
|  | 5.MD. 4 Measure volumes by counting unit cubes, using cubic cm , cubic in, cubic ft, and improvised units. | NY-5.MD. 4 Measure volumes by counting unit cubes, using cubic cm , cubic in., cubic ft, and improvised units. |

## MEASUREMENT AND DATA
